Forecast for Wednesday 20 Oct 2021

Weather: A few light showers at first, these falling as snow above 1000 metres in the north. Otherwise mainly dry, some sunshine into the afternoon. A cold front will move southeast from late afternoon onwards, bringing extensive low cloud and rain, this rain progressively turning to snow down to 700 metres across Argyll and Lochaber. Drier and clearer weather will follow on from the northwest by mid-evening accompanied by a significant fall in temperature.

Chance of cloud free mountain/hill tops above 800m: 70%

Visibility: Generally very good for most of daylight hours. Becoming poor in low cloud down to 600 metres from late-afternoon onwards, and whiteout conditions will develop for a time across the higher tops in the north.

Met Office Aberdeen Meteorologist's View

Storm force higher summit winds will make for severe wind chill and slow progress during the daytime. Be prepared for an abrupt change to hazardous winter weather later in the day. Snow will accumulate at higher elevations later, with icy surfaces likely down to mid-mountain level after dark, chiefly across the north.

Forecast for Thursday 21 Oct 2021

Weather: Bitterly cold, strong northwesterly winds will bring occasional showers of sleet, snow and hail through the day across Lochaber, Argyll and into the Trossachs, with a small risk of a thunderstorm. Mainly dry elsewhere. The snow level will gradually rise as the day progresses, with snow confined to 800 metres and above by late afternoon.

Maximum wind: Northwesterly gales or severe gales widely across upland areas, gusting 60 mph at times on the higher tops.

Chance of cloud free mountain/hill tops above 800m: 70%, best of the cloud free summits will be in the sheltered south of the area.

Visibility: Excellent outside of showers, but quickly falling poor as snow showers run through. Cloud lowering to 700 metres at times in showers, and combined with snow will lead to some navigational difficulties.

Temperature: **Glens:** 0 Celsius rising to 6 Celsius
At 800m: Minus 1 Celsius, rising to 2 Celsius later
Freezing level: 600 metres, rising to 1000 metres later in the day.
